**The Dynamics of Deforestation and Economic Growth in the Brazilian Amazon** By Lykke E. Andersen, Clive W. J. Granger, Eustaquio J. Reis, Diana Weinhold, Sven Wunder

Presenting an economic perspective of deforestation in the Brazilian Amazon, this study utilizes economic and ecological data from 1970 to 1996. It examines the extent to which land clearing promotes economic activity and growth and analyzes policies such as road building and subsidized credit. It explores whether the economic benefits of land clearing surpass the ecological costs and considers the viability of extractivism as an alternative to deforestation.

A book on the Brazilian Amazon, the world's largest tropical forest, always demands one's attention and this volume is an especially worthy addition to the literature. The authors have drawn on all available data sources to assess the benefits and costs of land-use change in the region.
