Information Retrieval: Searching in the 21st Century From Wiley

This book is an essential reference to cutting-edge issues and future directions in information retrieval

Information retrieval (IR) can be defined as the process of representing, managing, searching, retrieving, and presenting information. Good IR involves understanding information needs and interests, developing an effective search technique, system, presentation, distribution and delivery. The increased use of the Web and wider availability of information in this environment led to the development of Web search engines. This change has brought fresh challenges to a wider variety of users' needs, tasks, and types of information.

Today, search engines are seen in enterprises, on laptops, in individual websites, in library catalogues, and elsewhere. *Information Retrieval: Searching in the 21st Century* focuses on core concepts, and current trends in the field.

This book focuses on:

- Information Retrieval Models
- User-centred Evaluation of Information Retrieval Systems
- Multimedia Resource Discovery
- Image Users' Needs and Searching Behaviour
- Web Information Retrieval
- Mobile Search
- Context and Information Retrieval
- Text Categorisation and Genre in Information Retrieval
- Semantic Search
- The Role of Natural Language Processing in Information Retrieval: Search for Meaning and Structure
- Cross-language Information Retrieval
- Performance Issues in Parallel Computing for Information Retrieval

This book is an invaluable reference for graduate students on IR courses or courses in related disciplines (e.g. computer science, information science, human-computer interaction, and knowledge management), academic and industrial researchers, and industrial personnel tracking information search

technology developments to understand the business implications. Intermediate-advanced level undergraduate students on IR or related courses will also find this text insightful. Chapters are supplemented with exercises to stimulate further thinking.

Editorial Review

Review

"I would recommend Information Retrieval to readers who already have a base of knowledge on core IR concepts." (*Inf Retrieval*, 9 December 2010)

"The authors have definitely met the challenge of providing a comprehensive volume of factual knowledge on IR fundamentals. I highly recommend the book to those in both academia and industry." (Computing Reviews, 9 May 2011)

From the Back Cover

This book is an essential reference to cutting-edge issues and future directions in information retrieval

Information retrieval (IR) can be defined as the process of representing, managing, searching, retrieving, and presenting information. Good IR involves understanding information needs and interests, developing an effective search technique, system, presentation, distribution and delivery. The increased use of the Web and wider availability of information in this environment led to the development of Web search engines. This change has brought fresh challenges to a wider variety of users' needs, tasks, and types of information.

Today search engines are seen in enterprises, on laptops, in individual websites, in library catalogues, and elsewhere. *Information Retrieval: Searching in the 21st Century*

Information Retrieval Focuses on:

- Information Retrieval Models
- User-centred Evaluation of Information Retrieval Systems
- Multimedia Resource Discovery
- Image Users' Needs and Searching Behaviour
- Web Information Retrieval
- Mobile Search
- Context and Information Retrieval
- Text Categorisation and Genre in Information Retrieval

- The Role of Natural Language Processing in Information Retrieval: Search for Meaning and Structure
- Cross-language Information Retrieval
- Performance Issues in Parallel Computing for Information Retrieval

This book is an invaluable reference for graduate students on IR courses or courses in related disciplines (e.g.

computer science, information science, human-computer interaction, and knowledge management), academic and industrial researchers, and industrial personnel tracking information search technology developments to understand the business implications. Intermediate-advanced level undergraduate students on IR or related courses will also find this text insightful. Chapters are supplemented with exercises to stimulate further thinking.

About the Author

Ayse Goker

Dr. Ayse Goker is a senior academic at City University London. Her research since the early 90s has focused on developing novel search techniques and environments, with an emphasis on personalised and context-sensitive information retrieval and management systems. These occur particularly within mobile and wireless computing, and also in bibliographic and web environments. Her skills are in identifying user needs and developing innovative systems that meet them. In international collaborations she has also been successful, with extensive experience in designing projects and managing teams to implement them. On the teaching side, Ayse has developed course modules in information systems on several degree programmes at both postgraduate and undergraduate levels.

Ayse is also a company co-founder of AmbieSense Ltd, a mobile information system company. This project began as the AmbieSense EU-IST project at Robert Gordon University, Aberdeen where she was a Reader and project leader. She holds a lifetime Enterprise Fellowship from the Royal Society of Edinburgh and Scottish Enterprise. More recently she was selected for and completed the Massachusetts Institute of Technology (MIT) Entrepreneurship Development Program in Boston, USA.

In her profession, she has been the Chair of the British Computing Society's Specialist Group in Information Retrieval (BCS IRSG) (2000-2005). She was recognised for the totality of her endeavours by becoming a finalist in the Blackberry Women & technology Awards (2005) for Best Woman in Technology (Academia).

John Davies

Dr John Davies leads the Semantic Technology research group at BT. Current interests centre around the application of semantic web technology to business intelligence, information integration, knowledge management and service-oriented environments. He is Project Director of the 12m ACTIVE EU integrated project. He co-founded the European Semantic Web conference series. He is also chairman of the European Semantic Technology Conference and a Vice-President of the Semantic Technology Institute. He chairs the NESSI Semantic Technology working group. He has written and edited many papers and books in the areas of the semantic technology, web-based information management and knowledge management; and has served on the program committee of numerous conferences in these and related areas. He is a Fellow of the British Computer Society and a Chartered Engineer. Earlier research at BT led to the development of a set of knowledge management tools which are the subject of a number of patents. These tools were spun out of BT and are now marketed by infonic Ltd, of which Dr Davies is Group Technical Advisor. Dr Davies received the BT Award for Technology Entrepreneurship for his contribution to the creation of infonic.

Users Review

From reader reviews:

Anna Elam:

As people who live in the particular modest era should be revise about what going on or info even knowledge to make these people keep up with the era that is certainly always change and progress. Some of

you maybe can update themselves by reading books. It is a good choice for you but the problems coming to a person is you don't know what type you should start with. This Information Retrieval: Searching in the 21st Century is our recommendation so you keep up with the world. Why, because book serves what you want and want in this era.

Anna Raynor:

This Information Retrieval: Searching in the 21st Century is brand-new way for you who has attention to look for some information given it relief your hunger details. Getting deeper you into it getting knowledge more you know or perhaps you who still having tiny amount of digest in reading this Information Retrieval: Searching in the 21st Century can be the light food for you personally because the information inside that book is easy to get simply by anyone. These books produce itself in the form and that is reachable by anyone, yeah I mean in the e-book form. People who think that in reserve form make them feel drowsy even dizzy this reserve is the answer. So there is no in reading a e-book especially this one. You can find actually looking for. It should be here for you. So , don't miss the item! Just read this e-book sort for your better life along with knowledge.

Helen Johnson:

Don't be worry for anyone who is afraid that this book may filled the space in your house, you might have it in e-book means, more simple and reachable. This particular Information Retrieval: Searching in the 21st Century can give you a lot of pals because by you looking at this one book you have matter that they don't and make anyone more like an interesting person. That book can be one of one step for you to get success. This publication offer you information that possibly your friend doesn't understand, by knowing more than some other make you to be great men and women. So , why hesitate? We should have Information Retrieval: Searching in the 21st Century.

Edward Reed:

Do you like reading a book? Confuse to looking for your favorite book? Or your book has been rare? Why so many issue for the book? But any kind of people feel that they enjoy for reading. Some people likes studying, not only science book but in addition novel and Information Retrieval: Searching in the 21st Century or perhaps others sources were given know-how for you. After you know how the truly amazing a book, you feel want to read more and more. Science guide was created for teacher or students especially. Those textbooks are helping them to increase their knowledge. In different case, beside science book, any other book likes Information Retrieval: Searching in the 21st Century to make your spare time far more colorful. Many types of book like this.
